

# DARREN DAVIDSE

Front-End Web Developer | darren.davidse@gmail.com | 07760 666794 | Swindon, UK | [darrendavidse.github.io](https://darrendavidse.github.io)

---

## PROFESSIONAL SUMMARY

---

Front-end web developer with a long-standing background turning multi-step quote-and-checkout journeys and customer account portals into fast, usable interfaces, working closely in HTML5, CSS3 and JavaScript across Razor-based sites. One of three developers who moved a post-sale customer journey to self-service, helping cut contact-centre headcount for those processes from 60 to 19. Skilled at building multi-step forms that hold up under A/B testing, and making layouts behave consistently across brands and browsers — with enough ASP.NET Core / C# to wire a UI into its backend and own a feature start to finish.

## CORE SKILLS

---

Front-End: HTML5, CSS3 (including Bootstrap 3 & 5 theming and overrides), JavaScript (ES6+), Razor / CSHTML, responsive and cross-browser layout, multi-step form UX and client-side validation, A/B test variant builds

Design & Web: converting visual designs and wireframes into working pages, layout and UI consistency across brands, SEO-friendly markup

Supporting Back-End & Tools: ASP.NET Core MVC, C#, .NET 9, Entity Framework Core, SQL Server, Microsoft Azure App Service, Git, Azure DevOps pipelines.

## PROFESSIONAL EXPERIENCE

---

### Web Developer — Europa Group Ltd

Jan 2007 – Present

In-house developer for a multi-brand group, focused on the front end of quote-and-checkout websites and a self-serve customer account portal for brands including Ford, Nissan, RAC Bike, Motorcycle Direct, Wiser Choice and One Quote Direct.

- One of three developers who moved the group's post-sale customer journey from manual, agent-handled processes to self-service web forms and a customer account portal, so customers can make routine account changes themselves instead of calling in — contact-centre headcount handling these processes fell from 60 to 19 as a result.
- Built and maintain multi-step quote-and-checkout journeys in HTML, CSS, JavaScript and Razor across several brands, including A/B-tested UI variants of key steps and localStorage-based progress saving so customers can leave and resume a quote.
- Own front-end UI on the self-serve customer account portal, including responsive layouts for account management and mid-term change screens covering the addition or removal of insured items and additional users.
- Built web forms and an internal agent dashboard covering cancellations, automatic lapses, mid-term changes and renewals, giving contact-centre agents a faster route through changes they'd otherwise have to make by hand.
- Track down front-end issues across the multi-brand codebase — such as duplicate element IDs shadowing the wrong field in JavaScript, or Bootstrap style conflicts — using DevTools' Network, Elements and Console tabs to isolate the cause quickly.
- Rework CSS across shared and brand-specific stylesheets to fix layout regressions, override aggressive theme rules, and keep multi-brand styling consistent without duplicating code.
- Implement the Razor / CSHTML layer for these features and wire forms into C# controllers.
- Work alongside a second developer on a shared codebase in Git, coordinating merges and resolving Razor build issues across a multi-project solution.

### Web Developer — A-Plan Insurance

2003 – 2006

Front-end-led developer for the group's public-facing websites, working from visual design through to hand-coded, search-engine-friendly pages.

- Hand-coded HTML and CSS for the group's public websites, matching them to the group's visual identity and building pages to be search-engine friendly.
- Designed site graphics and page layouts in Adobe Illustrator ahead of building them out in code.

- Developed supporting PHP, SQL and CGI where the front end needed dynamic content or form handling and designed the databases behind it.
- Managed and maintained live websites and analysed visitor traffic patterns to guide layout and content changes.

## PROJECTS

---

### **Multi-Brand Brochureware Websites** — *HTML5, CSS3, JavaScript, Responsive Design*

- Several static marketing sites for a UK multi-brand group, covering products, help content and account information, with entry points through to the separate quote-and-checkout journey and customer account portal.

### **Multi-Brand Quote & Checkout Journey** — *HTML5, CSS3, JavaScript, Razor, Bootstrap*

- A multi-step quote-and-checkout journey (originally built for motorcycle and car insurance products) supporting several brands from one shared front end, with per-brand theming, A/B-tested variants of key steps, and client-side validation across a long, form-heavy flow.

### **Self-Serve Customer Portal** — *HTML5, CSS3, JavaScript, Razor, ASP.NET Core MVC*

- A responsive customer account portal for viewing account documents and making mid-term account changes, including the addition or removal of insured items and additional users, built to work cleanly across desktop and mobile.

### **Internal Agent Dashboard** — *HTML5, CSS3, JavaScript, Razor, ASP.NET Core MVC*

- A back-office dashboard used by contact-centre agents, built around a set of web forms — cancellations, automatic lapses, mid-term changes and renewals — plus a blocklist lookup tool and an in-chat online payments feature, all designed for quick, low-error use during live customer calls.

## EDUCATION

---

BSc (Hons), Computing, First Class — University of North London, 2000 – 2003

Core subjects: Software Development, Object-Oriented Programming (Java, C++), Web Usability

City & Guilds, Application Programming — Computeach International Ltd (distance learning), 2000

HNC, Electrical Engineering — RAF School of Technical Training, 1991

## ADDITIONAL EXPERIENCE

---

Ground Electrical Technician, Royal Air Force — Oct 1990 – Oct 1999
